

WHY ORCHIDS?

Current digital product development processes are linear, time-consuming, skill dependent and tough to scale. The Orchids web platform brings all the players in the product creation cycle together to easily see, co-create, review, and share fashion and apparel products in 3D.

Orchids gives you volume and speed so that you can get more done, faster!

WITH THE ORCHIDS PLATFORM

Users can:

Easily design products in any web browser. Orchids was created to make everything simple, quick, accessible and beautiful.

Upload 3D models from any authoring tool and work in an innovative way whether you're a specialist or generalist.

Store, compress and access 3D and other files such as tech packs, inspirations, sketches and cads instantly from any device.

Leverage existing asset libraries by connecting to or uploading from other systems.

Develop product variants, fast! Add materials and colors and apply prints and graphics in seconds on a real world scale.

Communicate with others using comments or threads to get input, and make accurate and faster decisions.

Build product lines and collections using interactive assortment boards.

Share products within or between organizations via links, downloads and web iFrame at multiple end-points to improve time to market.

About  embodee

Founded in 2008, Embodee helps the fashion industry develop 3D virtual products more efficiently and collaboratively for both online and physical stores. Its on-demand renderings of 3D products are unsurpassed in visual quality and interactivity. Embodee is headquartered in San Juan, Puerto Rico, and has employees across the United States and Europe.
